The following set of rules will be obeyed in reviewing of papers for your special session:

1. You are free to assign one reviewer for each paper submitted in your tracks. The reviewers must be from Computing background and must be PhD in relevant computing field. You may expand the reviewers list submitted with your special session proposal at your end.

2. One of the reviewers will be assigned from the organizing committee of PDGC 2024.

3. All invites to reviewers must be through Microsoft CMT portal.

4. The plagiarism score will be computed by the organizing committee through Turnitin software at back end.

5. The reviewers report, plagiarism score and Conference General Chair comments will become the basis of any paper acceptance/rejection.

6. The final decision of any paper acceptance/rejection will be taken by the Conference General Chair. His decision is final on all papers.

7. Compromised review process will not be tolerated and will be a strong reason to eliminate a paper from final proceedings even after presentation in PDGC 2024.

The accepted papers only are subject to registration. The organizing committee will send the invite for registration to the authors of the selected paper on its own.

Note: The plagiarism score of all submitted papers is with the organizing committee. It will look after this aspect on its own.
